Contact input

**Please use reliable contacts enough to flow 3VDC 5μA of current.

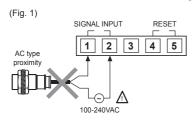

O Free voltage input

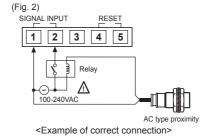

- **AC type proximity sensor cannot be used as the source of count input signals.
- ※Input terminal (♠, ♠) and reset terminal (♠, ♠) are insulated inside.
- XIt is not possible to reset with AC power or DC power.
- When relay contact is used as the source of RESET signal, please use reliable contacts enough to flow 3VDC 5µA of current.

O Input from AC type proximity sensor

In case of free voltage input type, do not connect AC proximity sensors instead of a switch as shown in the figure 1. It may cause malfunction due to sensor's leakage current. Connect a relay as shown in the figure 2.

Setting Switch

SW1 is a switch to Enable/Disable the front panel RESET key. ※Factory default: Enable

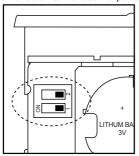

SW2 is a switch for setting max. counting speed. **Factory default: 1cps (Free voltage input type: 20cps is fixed)

© SW3

SW3 is a switch for decimal point position. (Xfactory default: no decimal point)

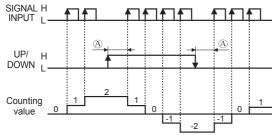

SW3	Decimal point
-1 O ON	Not use decimal point
0N 1	0.0
0	0.00
- 1 O N S	0.000

XChange SW3 setting after removing the case.

**Supply RESET signal (front panel or terminal RESET) after setting SW2, SW3 during operation.

■ Counter Operation Mode

• LA8N-BN/LA8N-BV model

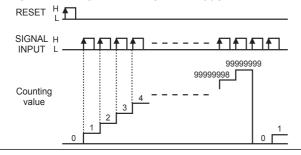

SIGNAL INPUT: Counting input,
UP/DOWN: Counting instruction input
UP/DOWN as "L" is count up (UP)
UP/DOWN as "H" is count down (DOWN)
The meaning of "H" and "L"

	Voltage input	No-voltage input	Free voltage input
Н	4.5-30VDC	Short	6-240VAC, 24-240VDC
L	0-2VDC	Open	0-2VAC, 0-2.4VDC

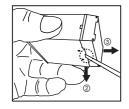

*(A) should be over 20ms of min. signal width. If it is below 20ms, it may cause counting error.
