THE MICRON EDGE

**While other manufacturers
treat transformers as
just one of a variety of
products, transformers
are THE major product
focus for Micron**

**This focus and resulting
commitment to excellence,
exemplified in our
unprecedented 20-year
warranty¹, has made
Micron
#1
with specifiers of
transformers
for over 30 years.**

¹ 20 years applies to all 600 volt class product.
LVGP and Medium Voltage are waranted for
one year.

TRANSFORMER SELECTION PROCESS

Determining Inrush and Voltage Requirements

Selecting a transformer for industrial control circuit applications requires knowledge of the following terms:

INRUSH VA is the product of the load voltage (V) multiplied by the current (A) that is required during start-up. It is calculated by adding the inrush VA requirements of all devices (contactors, timers, relays, pilot lights, solenoids, etc.), which will be energized together. Inrush VA requirements are best obtained from the component manufacturer.

SEALED VA also called Steady State VA, is the product of the load voltage (V) multiplied by the current (A) that is required to operate the circuit after initial start-up or under normal operating conditions. It is calculated by adding the sealed VA requirements of all electrical components of the circuit that will be energized at any given time. Sealed VA requirements are best obtained from the component manufacturer.

PRIMARY VOLTAGE is the voltage available from the electrical distribution system and its operational frequency, which is connected to the transformer supply voltage (H) terminals.

SECONDARY VOLTAGE is the voltage required for load operation, which is connected to the transformer load voltage (X) terminals.

Once the circuit variables have been determined, transformer selection is a simple 5-step process as follows:

1. Determine the Application Inrush VA by using the following industry accepted formula.

$$\text{Application Inrush VA} = \sqrt{(\text{INRUSH VA})^2 + (\text{SEALED VA})^2}$$

2. Refer to the Regulation Data Chart. If the primary voltage is basically stable and does not vary by more than 5% from nominal, the 90% secondary voltage column should be used. If the primary voltage varies between 5 and 10%, the 95% secondary voltage column should be used.
3. After determining the proper secondary voltage column, read down until a value equal to or greater than the Application Inrush VA is found. In no case should a lesser figure be used.
4. Read left to the Transformer VA Rating column to determine the proper transformer for the application. As a final check, make sure that the Transformer VA Rating is equal to or greater than the total sealed VA requirements.
5. Refer to the catalog pages to determine the proper catalog number based on the transformer VA and primary and secondary voltage requirements.

REGULATION DATA CHART

Transformer VA Rating	Inrush VA at 20% Power factor		
	NEMA / IEC 95% Sec. Voltage	NEMA / IEC 95% Sec. Voltage	NEMA / IEC 95% Sec. Voltage
25	100 / ----	130 / ---	150 / ---
50	170 / 190	200 / 220	240 / 270
75	310 / 350	410 / 460	540 / 600

2000	17000 / 18900	25500 / 27300	34000 / 36400
3000	24000 / 25700	36000 / 38500	47500 / 50200
5000	55000 / 58800	92500 / 98900	115000 / 122000

¹ For units with class 105° C insulation system.

² For units with class 180° C insulation system.

To comply with NEMA standards, which require all magnetic devices to operate successfully at 85% of rated voltage, the 90% secondary column is most often used in selecting a transformer. No comparable requirement is available for IEC.

MICRON INDUSTRIES CORPORATION
STATEMENT OF BUSINESS PHILOSOPHY

Micron Industries Corporation is a specialized transformer manufacturer. Product offerings are chosen carefully in order to provide the best available product. We deliberately choose to be highly selective and not just a "me-too" supplier of all transformer products. By policy and desire we have developed unparalleled expertise in application, design and manufacturability of the products we offer. Our mission is to provide complete customer satisfaction.

THE HISTORY OF IMPERVITRAN

Micron Industries Corporation, headquartered in Elmhurst, Illinois, is a designer and manufacturer of transformers. Micron's products are sold nationwide through a system of sales representatives and stocking distributors.

Micron's products are used extensively in industrial, commercial, and military markets. Products include control, power transformers and medium voltage control transformers.

In the mid 1960's Micron began as a custom coil winder for other transformer companies. In 1970 the Company expanded into the manufacturing of transformers, developing a patented epoxy encapsulated control transformer, known as **ImperviTRAN**. For over 30 years, this product has been nationally recognized as the quality control transformer that assists the user in reducing installed and life cost of system applications.

Micron has become known as the innovator of the industry. ImperviTRAN was the first control transformer with integral secondary fusing, molded terminal barriers to protect against electrical creepage, encapsulation for maximum protection in industrial and hostile operating environments.

In response to NEC changes, Micron was the first to add primary fusing to its transformer. Also, Micron added philslot head (combined blade and phillips) terminal screws to its products to assist OEM's and users in the installation process.

In 1996, Micron redesigned its terminal configurations to accept our proprietary SafeTouch IEC-529/IP20 covers for both the primary and secondary side of the transformer. In addition, the SafeTouch series of covers offers the same degree of protection for Micron's primary fusing options.

In 2003, Micron achieved UL/CSA recognition to build the ImperviTRAN in all three major temperature classes; 105°C, 130°C and 180°C. This allows an optimal design best fitting the customer application.

The Micron product offering covers one of the widest selections of VA sizes and voltage ranges in the industry based on the concept of designing unique competitive features and benefits into each product category. This design concept currently embraces not only ImperviTRAN, it is the major design force

SPECIFIC PRODUCTS

ImperviTRAN The Micron "hallmark product" offering, servicing the markets as the best Industrial Control Circuit Transformer available. All ImperviTRAN designs are UL listed and CSA certified. ImperviTRAN product is serviced through distribution with factory backup stock, thus creating a Micron competitive edge. ImperviTRAN is competitively priced with other designs (encapsulated and open construction) yet continues to command a price value equal to the installed cost, life cost and associated benefits such as Micron's standard secondary fuse clip and optional dual primary fuse block. ImperviTRAN is built in three major temperature classes. The following ending letter identifies part numbers not designed as Class 105°C: "F" (130°C), "H" (180°C)

GlobalTRAN, Is built to meet the demanding requirements of IEC-60742 and IEC-61558 as governed by the CB Scheme and carries the CE mark. GlobalTRAN is available from stock in many voltage combinations or can be designed to meet customer specifications. GlobalTRAN is built in three major temperature classes. The following ending letter identifies part numbers not designed as Class 105°C: "F" (130°C), "H" (180°C)

EconoTRAN, Compliments Micron's current line by offering control transformers through 5KVA utilizing a 180°C insulation system. The EconoTRAN line can be designed in VA sizes and termination configurations to suit the application.

Low Voltage General Purpose, Single and three phase in both encapsulated and ventilated construction. Designed to fill the needs of a harsh industrial environment.

Micron's excellent history of quality has led to an unprecedented 20-year warranty on all ImperviTRAN, GlobalTRAN, ValuTRAN or EconoTRAN transformers rated 600 volts and below.

Medium Voltage Control Transformers are available from Micron to fill most medium voltage to control voltage needs. The product class is available with either 2400 or 4160 volt primaries and 120/240 volt secondaries as standard. Custom voltages and VA designs are available for specific applications.

Other Products: Specific product designs can be developed to capture market opportunities; consult factory for assistance.

MARKETS SERVED

A control transformer steps down the voltage in a power circuit in order to safely operate control devices (contactors, relays, pushbuttons, etc.). Typical control voltages are 120 or 24 volts AC. There are also times when other output voltages are necessary (instrumentation, flow meters, PLCs, etc). Micron can provide a transformer to fit the needs of the most demanding input or control voltage application. Feel free to contact Micron or our local representative with your control voltage requirements. A few of the markets we serve are as follows:

Industrial Equipment

Compressors
Dock levelers
Heat treat ovens
Fire pump controllers
HVAC systems
Motor control centers
Paint systems
Waste compactors
Water purification
Welding equipment
Hydraulic power packs
Crane and hoist controls
Sorting equipment
Laser controls
Door actuators
Environmental chambers
Palletizing equipment

Food Service Equipment

Baking ovens
Deep fryers
Dishwashers
Grinders
Steam ovens
Water heaters
Ventilators
Chillers

Mainframe Equipment

Alarm systems
Auxiliary power systems
HVAC systems, controls and drives
Transfer switches
Voltage regulation

Agricultural

Incubation equipment
Irrigation and aeration
Grain drying and handling

Commercial Applications

Elevator controls
Building management systems
Commercial laundry equipment
Low voltage decorative lighting
Transfer switches
Car wash systems
Chillers
Waste management systems
Alarm systems

We welcome your calls on any issue regarding how Micron can be of service to you.

INDUSTRY AND INTERNATIONAL STANDARDS

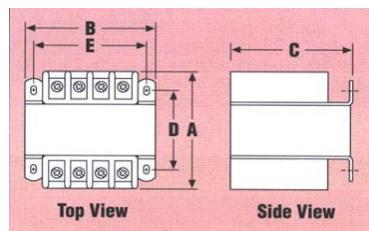

Micron offers a broad line of standard transformers, each made with the finest materials and workmanship. Laminations of high-grade silicon steel assure optimum performance and the finest quality copper magnet wire assures efficient operation. Insulation materials are of the highest rating available for the temperature class and mounting brackets of heavy gauge steel add strength and stability. All are UL 506 listed (File # E46323) and CSA certified (File # LR27533) and meet NEMA and ANSI requirements.

In response to the change in compliance standards for CE marking of industrial control transformers as required by IEC/EN guidelines, Micron has introduced new GlobalTRAN models in compliance with EN61558-2. This new IEC/EN standard replaces the previous IEC/EN 60742 standard for control power transformers that expired on December 31, 2003. The Micron design engineering department has produced 61558-2 compliant designs that permit the customer to retain mounting layouts used for the previous Micron 60742 designs.

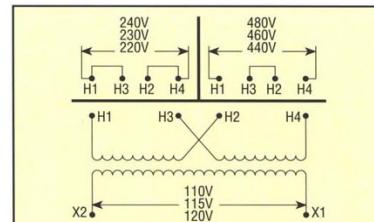

GlobalTRAN® products carry the CE mark, certifying 100% compliance with requirements of EN61558 for Non-Short Circuit Proof Isolating Transformers. GlobalTRAN control transformers feature touch-proof terminals, utilizing either Micron's SafeTouch terminal covers or a touch-proof terminal block, and meet true IP-20 or IP-00 terminal protection ratings as defined by IEC-529.

Of course, all GlobalTRAN products also carry the UL listing and CSA certification.

GlobalTRAN is the most reliable and versatile control transformer in the industry today.

PRIMARY FUSE KIT # FKTP-1001

In addition to factory installed primary fusing capability Micron offers a primary fuse kit for ImperviTRAN and ValuTRAN intended for field installation. The primary fuse kit includes a 2-pole Class "CC" fuse block, instructions and all associated mounting hardware. Additionally, this fuse block will fit most competitive units. To order this kit, use catalog number **FKTP-1001**. The primary fuse kit, when installed, will add a maximum of 11/16" to the transformer "A" dimension and 1-15/16" to the "C" dimension.

Installed as indicated.

1. Loosen two outer screws on primary side of transformer. On 6 position shell leave 2 spaces open between brackets.
2. Capture mounting brackets and necessary leads under terminal screws and tighten.
3. Affix fuse block to mounting bracket with supplied screws.

IP-20 COVER KIT # TPTC-2006

4. Remove two nuts holding primary fuse block to transformer. On FKTP-1001 kits, perform step #5 prior to affixing block to brackets.
5. Install retaining clips in base of fuse block. Secure with nuts or screws as appropriate.
- 6, 6a. Install fuse in cover and snap cover in place. When installed cover cannot be removed without releasing tab from detent (6a). A tip of a pen will suffice.

GLOBALTRAN ACCESSORIES

A number of fusing accessories are available for the GlobalTRAN product line. Please contact Micron with your design requirements.

UL OVERCURRENT PROTECTION - SECONDARY**MAXIMUM ACCEPTABLE RATING OF SECONDARY OVERCURRENT PROTECTION**

90		4/10	8/10	1-1/4	1-8/10	2-1/2	3-1/2	4-1/2	5	6-1/4	9	12
95		4/10	8/10	1-1/4	1-6/10	2-1/2	3-1/2	4	5	6	8	12
100		4/10	8/10	1-1/4	1-6/10	2-1/2	3-2/10	4	5	5-6/10	8	12
110		3/10	3/4	1-1/8	1-1/2	2-1/4	3	3-1/2	4-1/2	5	7-1/2	10
115		3/10	6/10	1	1-4/10	2	2-8/10	3-1/2	4	5	7	10
120		3/10	6/10	1	1-1/4	2	2-1/2	3-2/10	4	4-1/2	6-1/4	10
220		15/100	3/10	1/2	3/4	1-1/8	1-1/2	1-8/10	2-1/4	2-1/2	3-1/2	5-6/10
230		15/100	3/10	1/2	6/10	1	1-1/4	1-6/10	2	2-1/4	3-2/10	5
240			3/10	1/2	6/10	1	1-1/4	1-6/10	2	2-1/4	3-2/10	5

If the rated secondary current is less than 9 amps, the maximum rating of the overcurrent device is 167%; 9 amps or more, the maximum rating of the overcurrent device is 125%. If 125% does not correspond to a standard fuse rating, the next highest standard rating may be used.
