

Série BTS

The **BTS Series** (Built in Transmitter Sensors) sensors are mounted with the **NOVUS TxMini** temperature transmitter, which converts the output to 4-20 mA (2-wire loop powered), or Modbus-RTU protocol. The Pt100 or Pt1000 sensor can be supplied in 2 connector options: M12 and DIN43650.

Compact and precise, the configuration can be performed through a USB interface without the need for auxiliary power.

These sensors are excellent alternatives for conditioning and installation in applications with restricted spaces.
