

### **Model Number**

#### UB400-F77-E2-V31

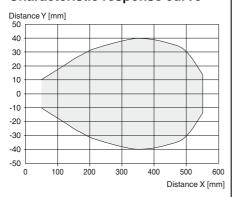

Ultrasonic direct detection sensor

#### **Features**

- Miniature design
- Program input
- Degree of protection IP67
- Switching status indicator, yellow LED

### **Dimensions**

#### **Description of Sensor Function**

The ultrasonic sensor transmits ultrasonic packets in quick succession and responds to their reflection off the detected object. The sensor has a switch output. The switching point is progammable (Teach-In). Objects beyond the taught-in switching point are not detected (background suppression).

#### **Teach-In of Switching Point SP**

To teach in a switching point, proceed as follows:

- 1. Connect the sensor and turn on the operating voltage.
- 2. Place the object to be detected at the required distance.
- Connect the teach-in input (ET) to -U<sub>B</sub>. This can be done using the pushbutton or the controller.
  - The LED will start flashing after 3 seconds to indicate that the sensor is ready to start the teach-in process  $^{(*)}$ .
- Disconnect the teach-in input (ET) with -U<sub>B</sub>. The switching point SP has now been taught in (\*).
- (\*) If no object is detected within the sensing range of the sensor, the sensor will start flashing at a faster rate. The switching point remains unchanged.

#### **Mounting instruction**

If the sensor is operated at temperatures below 0 °C, use the supplied distance plate. Only use the two rearmost mounting holes (located opposite to the transducer) for mounting the sensor.
