Mechanical stop

In accordance with the EN ISO 14119 standard, paragraph 5.2, "the position sensors should not be used as mechanical stop."

The actuator must not exceed the max. travel as indicated in the

The guard should not make a mechanical stop on the switch head.

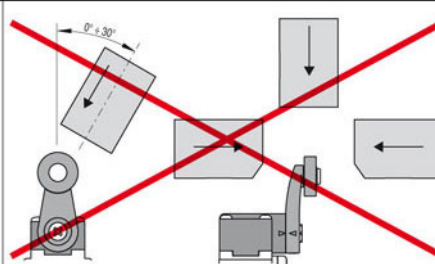

Actuation speed

φ	Vmax (m/s)	Vmin (mm/s)	
		L	R
15°	2,5	9	
30°	1,5	8	0,07
45°	1	7	
60°	0,75	7	

Contacts type:
R = snap action
L = slow action

Actuation modality

Recommended application	Application to avoid	Forbidden application
	<p>Possible application but with mechanical stress for the switch higher than expected, mechanical endurance is not guaranteed</p> 	

Installation of single switches for safety applications

- Use only switches with the symbol  (see figure on the side).
- Connect the safety circuit to **the NC normally closed contacts (11-12, 21-22 or 31-32).**
- **The NO normally open contacts (13-14, 23-24, 33-34) should be used only for signalling;** these contacts are not to be connected with the safety circuit. However, if in the same protection two or more switches are used, it is possible to connect the contact NO to safety circuit. In this case at least one of the two switches must feature positive opening and a NC normally closed contacts (11-12, 21-22 or 31-32) must be connected to the safety circuit.
- **The switch must be actuated with the minimum positive opening travel** indicated in the travel diagrams with symbol .
- **The switch must be actuated with the minimum positive opening force.**
- The fixing of the device must occur in compliance with the standard EN ISO 14119.

When the machine guard has been open and during the whole opening travel, **the switch must be triggered directly** (fig. 1) **or through a rigid connection** (fig. 2).
 Only in this way the positive opening of the NC normally closed contacts (11-12, 21-22, 31-32) is guaranteed.

In the safety application with only one switch for each guard, the switches **should not be applied to activate by release** (fig. 3 and 4) **or through a non rigid connection** (i.e. by a spring).
